What does RSFiles! do ?

RSFiles! is a *Joomla* based file manager for storing, managing and sharing files online through your web browser. It is a Joomla based application which you can install to fulfill web file management requirements of your company or organization. This web file manager allows your users to upload, download and organize any type of file, with an intuitive, easy to use user interface.

Built on the *Joomla 1.5x framework* and combined with the AJAX technology, **RSFiles!** will basically function on any working Joomla 1.5x installation.

The **RSFiles!** Joomla file manager is the best solution if your company or organization needs to serve and share files over the internet or just over an internal network. This file manager can be installed and run on your Joomla installation in few minutes so your web based file server will be ready for web based file sharing instantly. Joomla file manager **RSFiles!** provides a *robust, secure* and *easy* online file management for your users who need to access the files remotely from anywhere anytime.
